S U M M A R Y

Like to make games that feel good to play. As a Unity Game Developer, I've built everything from fluid melee combat controllers and patrol-based enemy AI to immersive VR experiences and 2D pixel-art adventures — across 6+ shipped projects. My game development internship gave me the rare experience of sole-developing a full 3D action-adventure game (Echoes of Andromeda) end-to-end: design, scripting, optimisation, playtesting, and professional documentation. I'm driven by the intersection of technical precision and creative storytelling, and I'm looking for a team where both matters.

S K I L L S

Game Engines: Unity 3D, Unity 2D

Programming: C# (Unity Scripting), Python, Java, JavaScript, HTML5, CSS3

XR / VR: Meta XR SDK, Unity XR Toolkit, Hand-Tracking, Controller Mapping

3D & Art Tools: Blender (Modelling, Animation, Asset Creation), Unity Terrain Editor, Particle Systems, Lighting

Tools: Git, GitHub, Visual Studio, Unity Hub, Unity Play Mode Testing

Soft Skills: Leadership, Communication, Problem-Solving, Teamwork, Time Management, Adaptability

W O R K E X P E R I E N C E

Unity Game Developer Intern | **CultivateU Studios Pvt. Ltd.** | Andhra Pradesh, India (Remote) | Jan 2026 – May 2026

- **Sole-developed** Echoes of Andromeda — a complete 3D third-person action-adventure game delivered as a polished, playable vertical slice across a structured 5-phase development pipeline.
- **Engineered** a custom character controller supporting run, jump, climb, and fluid melee combat animations with responsive input and clear hit feedback.
- **Implemented** enemy AI with patrol, proximity detection, and line-of-sight combat behaviours — balancing challenge and fairness validated across multiple playtesting rounds.
- **Architected** an environmental puzzle system (switches, pressure plates, doors) with escalating difficulty; play tested by 20+ college peers and faculty to surface edge-case bugs and balance gameplay.
- **Constructed** a layered level flow — safe exploration → intensifying enemy combat → multi-stage climax — applying flow theory to sustain player engagement throughout.
- **Optimised** heavy 3D assets, lighting, and particle systems to resolve performance bottlenecks and achieve stable frame rates during playtesting sessions.
- **Produced** full professional documentation: UML diagrams (Use Case, Class, Sequence, Activity), DFD, and structured test case reports under the mentorship of Mr. Arjun Bathula.

Web Development Intern | **Labmentix Pvt. Ltd.** | Bengaluru, India | June 2025 – Aug 2025

- **Built** responsive web interfaces using HTML5, CSS3, Tailwind CSS, and React.js, ensuring cross-device compatibility across all screen sizes.
- **Shipped** Bugghost — a full-stack bug-tracking platform with intuitive UI and a robust backend for end-to-end issue lifecycle management.
- **Delivered** FlexSign — a dynamic e-signature solution enabling secure, paperless document workflows with real-time status tracking.

EDUCATION

Bachelor of Computer Applications (BCA) | Navrachana University | Vadodara, Gujarat | June 2023 – June 2026

- Achieved a CGPA of 8.10 / 10.0 across the programme.
- Completed key coursework including Data Structures & Algorithms, DBMS, Java, Python, and Android (Native & Hybrid) App Development.

PROJECTS

Echoes of Andromeda — 3D Action-Adventure (Internship) — Unity 3D, C#, Blender, GitHub, Photoshop

- Developed a full third-person action-adventure game solo during internship at CultivateU Studios — a complete, playable vertical slice with custom AI, melee combat, puzzle systems, and narrative-driven level design.
- Iterated on combat balance, puzzle difficulty, and hazard timing based on structured feedback from 20+ college peers and faculty across multiple playtesting sessions.

Mythic Mayhem — Zombie Survival FPS — Unity, Blender, C#, Photoshop

- Designed a mission-based FPS with character selection, first-person combat, NPC rescue objectives, and vehicle escape mechanics; refined across 15+ peer playtesting sessions.

Shooting Range: XR / VR — Unity, Meta XR SDK, C#

- Programmed an immersive VR shooting range using Meta XR SDK with hand-tracking, controller-based weapon interaction, and real-time accuracy feedback for target training.

Doctor's Attack — Microscopic FPS — Unity, C#, Blender

- Created a creative FPS where the player navigates inside a patient's body to destroy pathogens at microscopic scale, blending arcade shooting with an educational concept.

Beginner's Adventure — 2D Pixel Art Game — Unity, Blender, C#

- Built a 2D pixel-art adventure game with forest exploration, quest system, NPC dialogue triggers, and scene transitions using modular, extensible architecture.

Roll-a-Ball — Unity, C#, Blender

- Roll-a-Ball is a light-weight, physics driven Unity experience designed to introduce interactive gameplay fundamentals.
- Built with Unity's Rigidbody system, it showcases smooth player control, dynamic object collection, and responsive camera movement – all in a compact, beginner friendly format.

Flappy Bird — Unity, C#, Blender

- An immersive 3D gaming platform built with Unity, featuring real-time multiplayer capabilities and stunning visual effects.

EXTRACURRICULAR & LEADERSHIP

- **Led** university sports events as Table-Tennis Head and Carrom Head, Navrachana University Sports Club.
- **Coordinated** Intelithon 2025 — a university-wide technical fest at Navrachana University.
- **Judged** Pickleball Tournament (2025); Table-Tennis & Kabaddi at NCC Cadet Carnival 2.0; Table-Tennis & Carrom at NCC Cadet Carnival 3.0.
- **Completed** NCC Bootcamp 2025 — military-style training demonstrating discipline, teamwork, and physical endurance.
